Thanks for Dongming Yan <dongming.yan@inria.fr> who points out there are some minor typo errors (bellow) in Table 1.

Model	Hausdorff distance
Bunny	0.0071
Gums	0.008
Tooth	0.006521

For the tooth model, there was a tiny isolated component in the target mesh, which increases the Hausdorff distance one order of magnitude in our original experiment. Thanks for Dongming's help to clean this tooth model and we re-computed the new/clean tooth data. The new Huasdorff distance becomes 0.006521. We will put this new clean tooth model in our web site as well.

Finally, we will fix these minor typos after this paper is read-proofed by IEEE editor.

Thanks,
Authors
